

# SAMS Palm Applications

1

## SAMS Environmental Health (EH) for Palm

allows a Corpsman to perform on-the-spot data input for heat stress surveys, potable water testing, and pest control activities. The push of a button uploads this data to SAMS. Time-saving features make data collection efficient and accurate. Drop-down lists save the user time when standard answers are available. If the desired response isn't listed, it can be entered free-hand—and next time it will be available in the drop-down list.

2

**SAMS Immunization for Palm** allows a Corpsman to set up basic data for several immunizations, and then quickly check off personnel as the immunizations are administered, making mass immunization easy to record. With the immunizations already set up, administering them to each person is as simple as selecting a name and route of administration. The push of a button instantly uploads this data to SAMS and updates personnel records.

3

**SAMS Supply for Palm** automates medical supplies inventory, allowing a user to download current inventory records from SAMS and then record inventory counts on the Palm device. If an inventory quantity has changed, the user can also record the reason for the change. Data is then uploaded to SAMS, where inventory records are adjusted. A job that used to be a paper nightmare—followed by the tedious task of manually inputting the recorded data into SAMS—is now a quick, efficient process.
